

It's never too late to start living a brain-healthy life!

Based on an extensive review of epidemiological studies and animal research*, the Institute of Medicine recommends four steps to keep your brain working well as you grow older:

Reduce vascular risk factors (like high blood pressure and cholesterol) with good diet, healthy lifestyle, and medication when necessary

Stay physically active-exercise regularly

Talk to your doctor about diseases and drugs that may impair brain function

Keep your brain lively with social and intellectual activity, and adequate sleep
